Course Code: DSA0307

Course Name: Natural language processing

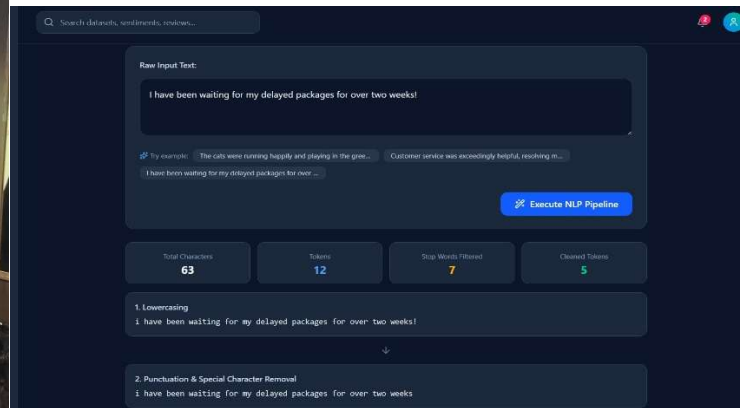

Course Faculty: Dr. K. Anbazhagan

Reg. No.: 192425294

Slot: D

Project Title: CUSTOMER SENTIMENT AND INTENT ANALYSIS PLATFORM FOR BUSINESS INTELLIGENCE

MODULE 3: BERT TOXIC COMMENT DETECTION

Project Description:

- Collected and preprocessed online comments to identify potentially **toxic, offensive, or harmful content**.
- Used **BERT (Bidirectional Encoder Representations from Transformers)** to understand the contextual meaning of comments.
- Classified comments into **toxic and non-toxic categories** based on their linguistic content.
- Generated classification results and performance metrics to support **automated content moderation and safer online communication..**

Key Components

My contribution was developing and evaluating the sentiment and intent classification models. I addressed it by preparing the data carefully and comparing the model results using suitable evaluation metrics. I independently learned more about feature extraction and classification techniques. This project improved my understanding of machine learning applications. If repeated, I would experiment with advanced contextual models for improved accuracy
